

WISI DXA 1717

FLEXSWITCH line amplifier, 16 x SAT-IF and 1 x terrestrial

Description

Der DXA 1717 is an amplifier for 16 satellite IF polarizations and terrestrial signals. With 22 dB gain, it is optimized for loss compensations in installations build up with cascable multiswitches. The gain can be individually set for each line, in order to compensate differences in level between the polarizations. The amplifier can be power supplied through the trunks or alternatively over the corresponding DC input connector by using one of the external power supply units DXP 1812 or DXP 1830.

At a glance:

- Line amplifier for 16 satellite IF polarizations and terrestrial signals
- Terrestrial path to distribute DVB-T/T2, DAB and FM
- Adjustable gain for each trunk
- Remote-powered via the SAT-IF trunk lines
- High screening efficiency according to Class A
- Compact dimensions paired with installation friendly distance between the F-connectors
- Colour-coded inputs and outputs
- Compatible with all cascable DXC 17xx
